

Problem Statement

College students who struggle to form study groups need an easy way to connect with classmates to have access to collaborative learning and academic support.

Details

College students often struggle to form study groups and connect with classmates. This problem typically emerges in classrooms, in-person or online, where students lack a systematic means of connecting with others who share their study needs, schedules, or academic goals. They miss out on chances for collaborative learning and support without an easy way to find peers. Solving this problem is important because it helps create a more connected and supportive learning environment, leading to better success that improves both individual and group success.
